		HUYEN LE PRIMARY EXAMINER	

Continuation of 11. does NOT place the application in condition for allowance because: Applicant's argument are not persuasive. Regarding applicant's argued that Anderson does not teach the signal being transmitted from one of the at least one transmitters to the receiver and means for generating and transmitting configuration parameters...the configuration parameters being transmitted independent of the siraly" (see the remark page 6 second paragraph). The examiner disagrees that. Anderson teaches that a wireless transmission system comprising (see fig.2). a receiver Comprising an antenna (see fig.g, 900)., at least one transmitter (900)., a signal which is modulated in at least one of amplitude, frequency and phase (see col. 12 line 47-col. 13 line 22), the signal being transmitted from one of the at least one transmitters to the receiver, means (see fig.g) for generating and transmitting configuration (by dsp control the switches) parameters (916,924, 928) for enabling demodulation of the signal, and the configuration parameters being transmitted independent of the signal (by push the keyboard and see col. 20 line 48-col. 21 line 31). and means (see fig.g, 916, 924,928) for receiving and processing the configuration parameters, said means (see fig.g, 916, 924,928) being provided in the receiver (see col. 13 line 3-col. 15 line 1 1). It meets the limitation of claim 11 recited. Applicant further argued that these limitations require two independent channels: one for transmitting the siral and one for transmitting the configuration parameters independent channels is not claimed, and thus moot.

Applicant further argued that neither Anderson nor Topholm nor any combination thereof teaches or suggests transmitting configurationparameters through a control chrmnel independent of the signal transmitted through the information channely" (see the remark page 6, fourth paragraph). The examiner responds that. In response to applicant's argument that there is no suggestion to combine the references, the examiner recognizes that obviousness can only be established by combining or modifying the teachings of the prior art to produce the claimed invention where there is some teaching, suggestion, or motivation to do so found either in the references themselves or in the knowledge generally available to one of ordinary skill in the art. See In re Fine, 837 F.2d 1071, 5 USPQ2d 1596 (Fed. Cir. 1988)and In re Jones, 958 F.2d 347, 21 USPQ2d 1941 (Fed. Cir. 1992). In this case, Because, Anderson (783) and Topholm (819) both teach hearind aid with a control device, therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to combine the teaching of Tepholm into Anderson to provide a hearing system running faster by two separated channel, such as a communication channel and a control channel. The combination meets the limitation as the claims recited.
